Homework title: Hw1_Histogram Equalization

Student's name (registration number) : 黃宗德(406410091)

Data due: April 21, 2020

Data handed in : April 19, 2020

Technical description

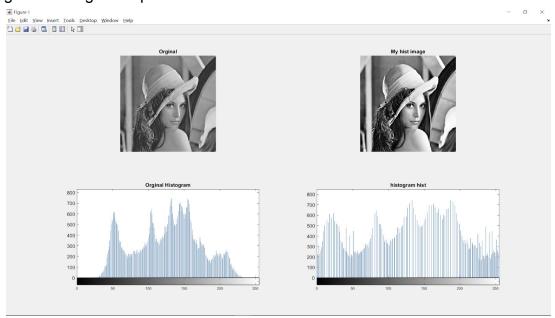

global histogram equalization

 $p_x(i)=p(x=i)=rac{n_i}{n},\quad 0\leq i< L$ 首先計算灰階i出現的次數,並計算其機率 , n為圖像中像素總數,L為灰階數(通常為256)。將計算出來的pdf轉換成cdf,轉換方式為:將先前的pdf值做加總,最後使其疊加成總合為1。程式中將灰階i出現的次數,一步步加總後並除以總數n後,算出cdf。將此次的cdf做round(cdf(i)*L),重複此方式,將做完round的值一併輸出後的圖,便是histogram equalization後的圖。

local histogram equalization

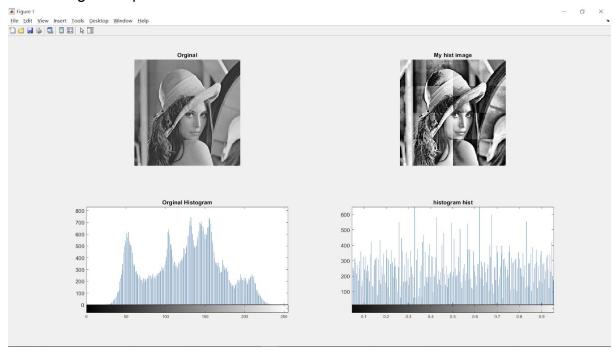

相較於global histogram equalization, local histogram equalization採用的方式為,將圖片裁切成相等的大小後,對每塊圖形各自做histogram equalization,因此,總體的圖會呈現出一塊塊各自histogram equalization的感覺。

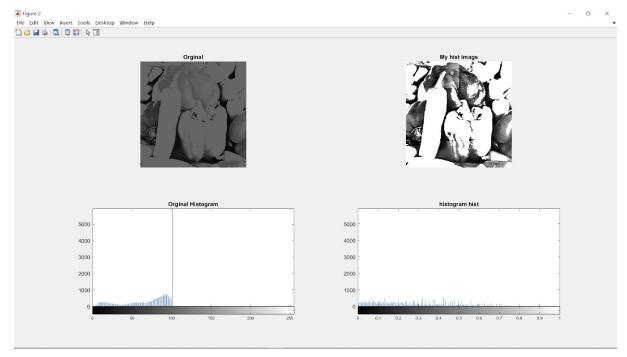

Experimental results global histogram equaliztion

local histogram equalization
